

Creation:

Home page: (grabbed from online)

<https://www.keentodesign.com.au/web-design-templates/cyber-security-website-template/>

- rename/reword
- Removed extra buttons
- Changed order of visuals
- Created template off of home page: (online resource only gave me the home page. No template, links to other places, nothing, just one page)

Template

- Kept nav and footer
- Eventually turned into service page

Services

- Changed main css page because the effect when loading the page kept failing to load visuals
- Also changed html to slider-item-show5 instead of show4
- Turned the visuals into buttons
- Added my own visuals
- Added more pages for every service

Contacts

- Added contact page and implemented a form
 - <https://developer.mozilla.org/en-US/docs/Web/HTML/Reference/Attributes/required>
 - Learned alot from this link
- Changed colors to align with my theme
- Cleaned up the looks to make it look professional

About us

- Taken from “testimonials” from home page

Details:

- Linked pages together
- Reworded all pages
- Added custom pictures to all pages

Summary:

- Created 7 different pages and linked them all together

- 8 pages total, (index, services, consulting, audit, pentest, do it yourself, about, contact)
- Wrote info on every page
- Added custom pictures, buttons, and colors
- Nearly all created assets were copy pastes of prior assets with slight modifications

Ideally this would be hosted externally
